

Ice Experiment

Required Materials:

- (1) Clean Snack Pals container (any shape or size will work!)
- Water
- Scissors or box cutter (optional)

Step 1: Take your Snack Pals container, fill it almost to the top with water, and leave it in the freezer overnight.

Step 2: The next day, take the container out and remove the ice. If it's difficult to get out, you can ask an adult to help cut the container off if you need to.

Step 3: Put the giant ice cube in a full bathtub, bowl, sink, or nearby pond or lake. Now observe!

- Do you think it will float or sink?
- How long do you think it will take to sink?
- Try making other shapes and see what changes!

Don't forget to submit a photo of your masterpiece to the art gallery at hannafordsnackpals.com!
