Carlos Carrot's Cloud Finder

Clouds are like floating collections of water or ice droplets high up in the sky. They come in all sorts of shapes and sizes, but there are four main types: Cirrus, Cumulus, Stratus and Nimbus.

Carlos Carrot created a cool Cloud Finder to help you spot these different clouds. Follow the steps below to put your Cloud Finder together, then go outside and see how many clouds you can identify!

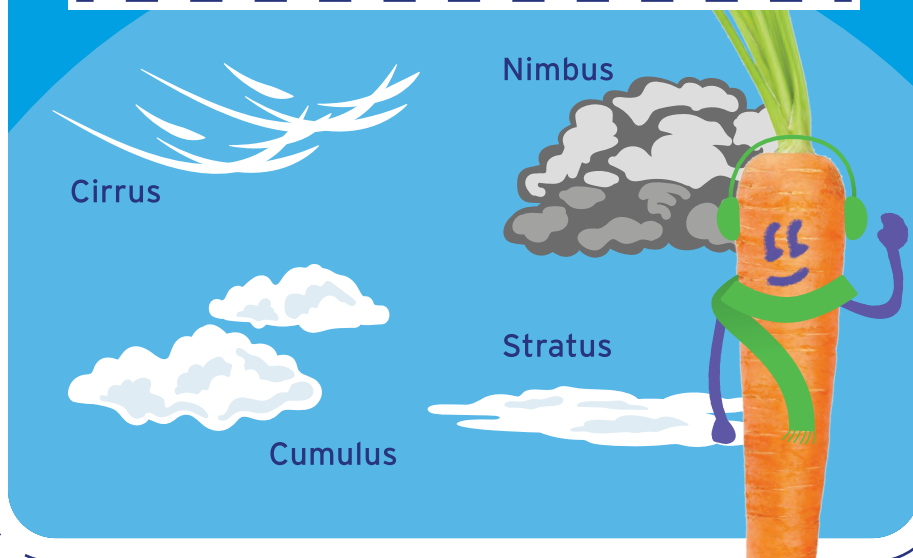

Cloud Finder

CUT AWAY THIS AREA

How to Make Your Cloud Finder:

1. **Cut It Out:** Carefully cut along the lines to remove the Cloud Finder from this page.
2. **Cut Out Inner Box:** Cut out inner box along the dashed lines.
3. **Stick It On:** Glue or tape a large popsicle stick to the back of the Cloud Finder.
4. **Cloud Hunt:** Go outside and use your Cloud Finder to spot and name different clouds! Try to find one of each type if the weather allows.

Have fun exploring the sky with Carlos Carrot and the rest of the Snack Pals!
